

JARVIS AI

Complete Product Guide & Final Report

Telegram-First Remote Productivity Assistant

Platform: Windows 10/11

Author: Manikandan K

License: MIT | Status: Production-ready

Version 1.0 - Product Release

Product Name: JARVIS AI

Type: Telegram-First Remote Productivity Assistant

Platform: Windows 10/11

Author: Manikandan K

License: MIT

Status: Production-ready

1. What Is JARVIS AI?

JARVIS AI is a personal productivity assistant that runs on your Windows PC and is controlled from your phone via Telegram.

You send a simple message - JARVIS executes the task on your computer.

Example:

You (on phone): study workspace

JARVIS (on PC): Opens Documents, Chrome, ChatGPT, and Notepad automatically

It is not a commercial SaaS product. It is a single-user personal productivity system designed for daily use.

Core Idea

Send a message and get things done.

No coding. No technical commands. No need to sit at your PC for small tasks.

2. What's New (Product Transformation)

JARVIS was rebuilt from a prototype into a stable, maintainable product.

Before (Old Prototype)

- * Multiple broken entry points (CLI, GUI, Flask API, separate Telegram bot)
- * Duplicate command code in 3 places
- * Hardcoded passwords and Telegram token in source code
- * GUI and Electron experiments that did not work reliably
- * Reminders lost when app closed
- * Hardcoded app paths (only worked on one PC)
- * Dangerous full C: drive file search

After (New Product)

Feature	Status
Telegram as primary interface	Control PC fully from phone
Single command engine	One system, no duplicate logic
Command aliases	yt, launch youtube, hey jarvis open youtube a

Secure login	Admin user ID + password required
Secrets in .env	No passwords or tokens in code
Persistent reminders	Saved to file, survive restarts
Telegram reminder alerts	Reminders ping your phone when due
Config-driven workspaces	Add workspaces without editing code
Automatic app discovery	Finds Chrome, Cursor, Python automatically
Browser-based AI apps	ChatGPT, Gemini, Copilot, WhatsApp in browser
28 automated tests	All passing
Clean architecture	Removed GUI, Electron, voice CLI, dead code

3. What JARVIS Can Do

Category	Capabilities
System Control	Brightness, volume, mute, screenshot, lock, s
File Access	Open Desktop, Documents, Downloads, Pictures,
App Launching	Chrome, Cursor, Python, YouTube, ChatGPT, Gem
Workspaces	One command opens your full study or work set
Reminders	Set, view, and delete reminders from Telegram
AI Help	Explain topics, summarize text (optional Groq
Quick Info	Time, date, greetings, motivation

4. Full Installation Guide

Requirements

- * Windows 10 or 11 PC (must stay on for remote control)
- * Python 3.9 or higher
- * Telegram account on your phone
- * Internet connection

Step 1 - Download the Project

```
git clone https://github.com/Manikk67/jarvis-ai-product.git
cd jarvis-ai-product
```

Step 2 - Install Python Dependencies

```
python -m venv venv
venv\Scripts\activate
pip install -r requirements.txt
```

Step 3 - Create Your Telegram Bot

1. Open Telegram and search @BotFather
2. Send: /newbot

3. Choose a name and username (must end in bot)
4. Copy the bot token

Step 4 - Get Your Telegram User ID

1. Search @userinfobot on Telegram
2. Send any message
3. Copy your numeric User ID

Step 5 - Configure Environment

```
copy .env.example .env
```

Edit .env:

```
TELEGRAM_BOT_TOKEN=your_bot_token
TELEGRAM_ADMIN_USER_ID=your_user_id
TELEGRAM_PASSWORD=your_secure_password
GROQ_API_KEY=your_groq_api_key
ASSISTANT_NAME=Jarvis
USER_NAME=YourName
```

Step 6 - Start JARVIS

```
python main.py
```

Keep this window open while using JARVIS.

Step 7 - Connect from Telegram

1. Open your bot in Telegram
2. Send: /start
3. Send: /login your_password
4. Send commands: open youtube, study workspace, help

Step 8 - Run on Startup (Optional)

Add a shortcut to main.py in Windows Startup folder (shell:startup) so JARVIS runs when Windows boots.

5. How to Use JARVIS Daily

Login Each Session

```
/start
/login your_password
```

Basic Pattern

1. Open Telegram
2. Message your JARVIS bot

3. Type a command in plain English

4. JARVIS executes on PC and replies

Natural language works - these all open YouTube:

* open youtube

* launch youtube

* yt

* hey jarvis open youtube

6. Complete Commands List

SYSTEM

Command	Aliases
brightness up	increase brightness, brighter
brightness down	decrease brightness, dimmer
volume up	increase volume, louder
volume down	decrease volume, quieter
volume up to 50%	set volume to 30%
mute volume	mute, silence
unmute volume	unmute
screenshot	take screenshot, capture screen
open cmd	open command prompt, open terminal
lock computer	lock pc, lock screen
shutdown computer	shutdown, shutdown pc
restart computer	restart pc, reboot

FILES

Command	Aliases
open desktop	launch desktop
open documents	launch documents
open downloads	launch downloads
open pictures	launch pictures
open videos	launch videos

APPS

Command	Aliases
open youtube	launch youtube, yt
open chatgpt	launch chatgpt
open gemini	launch gemini
open copilot	launch copilot

open whatsapp	launch whatsapp
open chrome	launch chrome
open cursor	launch cursor
open files	open file explorer
open python	launch python
open notepad	launch notepad

WORKSPACES

Command	Opens
study workspace	Documents, Chrome, ChatGPT, Notepad
work workspace	Chrome, ChatGPT, Gemini, WhatsApp, Files, Not

REMINDERS

Command	Example
remind me to ...	remind me to call mom in 5 minutes
show reminders	list reminders
delete reminder	delete reminder abc12345

AI AND HELP

Command	Description
hello	Greeting
time	Current time
date	Today's date
motivate me	Motivational quote
explain ...	AI explanation (needs Groq key)
summarize ...	AI summary (needs Groq key)
help	List all commands

7. Daily Life Usage Examples

Morning

```
time
work workspace
remind me to take lunch break in 4 hours
```

Studying

```
study workspace
mute volume
brightness down
remind me to review notes in 2 hours
```

Away from PC

open whatsapp
screenshot
lock computer

End of Day

show reminders
lock computer

Sample Daily Schedule

Time	Command	Result
8:00 AM	work workspace	Full work setup opens
8:05 AM	remind me to stand up in 1 hour	Health reminder set
10:30 AM	open chatgpt	Quick AI help
12:00 PM	(Telegram alert)	Reminder notification
2:00 PM	screenshot	Screen captured
6:00 PM	lock computer	PC secured
10:00 PM	shutdown computer	PC shuts down from phone

8. Product User Journey

For End Users (Non-Technical)

Needs: Windows PC, Telegram, 15 minutes setup

Flow: Download -> Install packages -> Create bot -> Fill .env -> Run main.py -> Login -> Done

Daily use: Open Telegram -> Message bot -> Get things done

For Product Owner

Provide: GitHub repo, README, .env.example, workspace config

User configures: Bot token, user ID, password, optional API key, app paths

9. Configuration Files

File	Purpose
.env	Secrets (token, password, API keys)
config/settings.json	App discovery, browser URLs
config/workspace_config.json	Workspace definitions
data/app_paths.json	Saved app install paths
data/reminders.json	Active reminders
logs/jarvis.log	Command history and errors

Add Custom Workspace

Edit config/workspace_config.json:

```
{
  "night workspace": {
    "description": "Evening coding session",
    "items": [
      {"type": "app", "target": "cursor"},
      {"type": "browser", "target": "youtube"},
      {"type": "app", "target": "notepad"}
    ]
  }
}
```

Then send: night workspace

Fix Missing App

Edit data/app_paths.json:

```
{
  "cursor": "C:\\Users\\You\\AppData\\Local\\Programs\\cursor\\Cursor.exe"
}
```

10. Security

Protection	How
User ID lock	Only your Telegram ID works
Password login	/login required each session
No secrets in code	All in .env only
Command whitelist	Unknown input rejected safely
Activity logging	logs/jarvis.log

Rules: Strong password, never share .env, revoke leaked tokens in @BotFather.

11. Limitations

Limitation	Detail
Windows only	Not for Mac/Linux
PC must be on	Cannot wake shut-down PC
Single user	One admin only
No GUI	Telegram only
AI optional	Needs Groq API key
Shutdown instant	No confirmation prompt

12. Project Structure

```
JARVIS_AI/
??? main.py          Start Telegram bot
??? config.py        Loads .env
```

```
??? requirements.txt
??? config/           Settings and workspaces
??? core/             Engine, registry, Telegram, AI
??? commands/         Command registration
??? automation/       PC control, reminders
??? data/             User app paths and reminders
??? tests/            28 automated tests
??? logs/             Runtime logs
```

13. Quick Start Cheat Sheet

```
git clone https://github.com/Manikk67/jarvis-ai-product.git
cd jarvis-ai-product
python -m venv venv
venv\Scripts\activate
pip install -r requirements.txt
copy .env.example .env
python main.py
```

Telegram:

```
/start
/login your_password
help
work workspace
remind me to drink water in 30 minutes
open youtube
lock computer
```

14. Summary

JARVIS AI is a secure Telegram remote control for your Windows PC - a daily productivity shortcut system for workspaces, reminders, system control, and AI help.

Success metric: Control your PC from your phone every day without reading code.
